What's New in the Windows Vista UAC Demo Sample Code?

□ This demo runs a simple Windows Forms application which demonstrates how UAC works. You can use this demo as an example to develop a Windows Forms application that is secured and has the least privilege requirement for UAC. □ For the purpose of this demo, this tool is developed using the Microsoft Visual Studio 2005 IDE. Thus a Windows Forms application is developed for demonstration. □ UAC is used in this sample by detecting and then raising the UAC elevation exception to prevent the Windows Forms application from being run with administrator privileges. The UAC elevation exception and the code that handles this exception is provided by the Microsoft.VC80.CRT.dll. □ After the administrator logs off, UAC will automatically revert to the previous setting and the application will run with the administrator privileges. □ The sample code demonstrates how the Windows Forms application is not affected by UAC when it is "Trusted for current user only" and "Mandatory integrity level for all users". However, UAC will prompt the user if a file is modified and ask him/her whether to "Allow this action" or "deny this action" before the file is opened. □ The sample code demonstrates how to write to HKLM\Software\Microsoft\Windows\CurrentVersion\Policies\System for the purposes of putting the application into "Trusted for current user only" mode, but also shows how to write to HKEY_CURRENT_USER for the purposes of putting the application into "Mandatory integrity level for all users" mode. □ This sample does not handle the cases where UAC is enabled and disabled for the current user only and the current user only. □ This sample does not handle the cases where UAC is disabled for all users. □ This sample does not handle the cases where UAC is enabled for all users. □ This sample code is written in the C# programming language and compiled using Visual Studio 2005. Key Points □ The directory that is specified in the Save Dialog is used for storing the output file. □ The demo uses a different directory for storing the output file for every run. □ The directory that is specified in the Save Dialog is used for storing the output file for the demo. □ The directory is specified in the Save Dialog is used for storing the output file for every run. ◆

System Requirements For Windows Vista UAC Demo Sample Code:

Experience with SC2 and the Kerbal Space Program is recommended, as we'll be using KSP. We have also supplied the required Steam account to allow access to our download pages. In addition, you will need a modern computer with a decent video card. We can't guarantee 100% accurate gameplay if your video card is too old or too low spec, so we highly recommend that you have a fairly recent card. For additional info on the Kerbal Space Program, the webpage can be found here:
